1. Summary

The Excel Supply Chain Dashboard Project aims to analyze and visualize supply chain data to support data-driven decision-making. Using Excel's Power Query and Pivot Table functions, the project focuses on monitoring sales performance, assessing delivery efficiency, identifying key customers, and analyzing sales trends. The methodology includes data collection and preparation, Power Query transformations, creating and configuring pivot tables, and visualizing data through charts and graphs.

Key insights from the dashboard include:

- Identification of best-selling products, aiding inventory and marketing optimization.
- Analysis of delivery status distribution, helping to monitor and improve delivery performance.
- Visualization of sales trends over time, enabling the identification of sales patterns and seasonal trends.
- Highlighting top customers based on sales contribution, aiding customer relationship management and marketing efforts.

The project demonstrates the effective use of Excel tools in managing and interpreting complex supply chain data, providing valuable insights for stakeholders. The interactive dashboard serves as a powerful tool for making informed business decisions, showcasing proficiency in Excel and adding significant value to any business or data analyst portfolio.

2. Introduction

This document provides comprehensive details about the Excel Supply Chain Dashboard project. The project aims to analyze and visualize supply chain data for a company using Excel's Power Query and Pivot Table functions. The interactive dashboard is designed to offer valuable insights into various aspects of the supply chain, thereby supporting data-driven decision-making processes. By leveraging these Excel tools, the project seeks to enhance the company's understanding of its operations, sales, and customer behaviors.

3. Objectives

The primary objectives of the Supply Chain Dashboard project are multifaceted, focusing on various critical aspects of the supply chain to ensure a holistic analysis:

- **Monitor Sales Performance and Identify Best-Selling Products:** The project aims to track and evaluate the sales performance across different products. By identifying the best-selling products, the company can optimize its inventory management and marketing strategies. Understanding which products drive the most sales helps in making informed decisions about stock levels, promotional activities, and resource allocation.
- **Assess Delivery Performance and Identify Areas for Improvement:** Another key objective is to assess the efficiency and effectiveness of the delivery process. The dashboard provides insights into delivery times, late deliveries, and potential risks. By analyzing this data, the company can pinpoint areas where delivery performance can be improved, such as specific regions or time periods that experience delays. This, in turn, helps in enhancing customer satisfaction and reducing operational costs.
- **Recognize Key Customers Contributing Toward Sales and Tailor Marketing Strategies:** The project seeks to identify key customers who contribute significantly to overall sales. By recognizing these important customers, the company can develop targeted marketing strategies to retain and nurture these relationships. Tailored marketing efforts can include personalized promotions, loyalty programs, and special offers, which can increase customer retention and lifetime value.
- **Analyze Sales Trends of Given Products and Enable Better Business Decisions:** Analyzing sales trends over time is crucial for understanding the market dynamics and customer preferences. The dashboard provides visual representations of sales trends, allowing the company to spot patterns, seasonal variations, and emerging market trends. This information is vital for strategic planning, forecasting future sales, and making proactive business decisions. By understanding sales trends, the company can adjust its strategies to capitalize on growth opportunities and mitigate potential risks.

Overall, the Supply Chain Dashboard project aims to leverage the power of Excel to provide a comprehensive and actionable analysis of the company's supply chain. Through detailed monitoring, assessment, and trend analysis, the project supports the company's goal of enhancing operational efficiency, improving customer satisfaction, and driving business growth.

4. Methodology

Data collection and preparation.

The original dataset includes detailed information on orders, customers, products and shipping details with the following columns:

- Type
- Days for shipping (real)
- Days for shipment (scheduled)
- Benefit per order
- Sales per customer
- Delivery Status
- Late_delivery_risk
- Category Id
- Category Name
- Customer City
- Customer Country
- Customer Email
- Customer Fname
- Customer Id
- Customer Lname
- Customer Password
- Customer Segment
- Customer State
- Customer Street
- Customer Zipcode
- Department Id
- Department Name
- Latitude
- Longitude
- Market
- Order City
- Order Country
- Order Customer Id
- order date (DateOrders)
- Order Id
- Order Item Cardprod Id
- Order Item Discount
- Order Item Discount Rate
- Order Item Id
- Order Item Product Price
- Order Item Profit Ratio
- Order Item Quantity
- Sales
- Order Item Total
- Order Profit Per Order

- Order Region
- Order State
- Order Status
- Order Zipcode
- Product Card Id
- Product Category Id
- Product Description
- Product Image
- Product Name
- Product Price
- Product Status
- shipping date (DateOrders)
- Shipping Mode

Steps for Power Query Transformations

The cleaned dataset after using Power Query includes the following columns:

- Order Item Id
- Customer Id
- Customer Name
- Customer Email
- Customer Password
- Customer Street
- Customer City
- Customer Zipcode
- Customer State
- Customer Country
- Customer Segment
- Product Id
- Product Name
- Category Id
- Category Name
- Product Image
- Product Status
- Product Price
- Order Item Quantity
- Order Item Discount
- Order Item Discount Rate
- Sales (with discount)
- Sales (no discount)
- Order Item Profit Ratio
- Benefit per Order
- Department Id

- Department Name
- Latitude
- Longitude
- Market
- Order Id
- Oder City
- Order State
- Order Country
- Order Region
- Order Status
- Order Date
- Days for shipment(scheduled)
- Days for shipment (Actual)
- Shipping Date
- Late delivery Risk
- Delivery Status
- Shipping Mode
- Type

Power Query Transformations

1. **Import Data:** Import the raw data into Power Query.
2. **Data cleaning:**
 - Dropped redundant columns
 - i. Order Profit per Order (Same as Benefit per order)
 - ii. Order Item Total (Same as Sales per Customer)
 - iii. Order Customer Id (Customer Id)
 - iv. Order Item Cardpod Id (Product Card Id)
 - v. Order Item Product Price
 - Rename Product Card Id into Product Code.
3. **Data Transformation:**
 - **Combining column.**
 - Combining Fname column with Lname column and name it as Customer Name.
 - **Rearrange Column.**
 - Rearrange the column to make the table much more readable.
 - **Convert data types.**
 - Ensured all columns have the appropriate data types for accurate analysis.

Creating and Configuring Pivot Tables

1. **Create Pivot Tables:**
 - Sales per product.
 - Percentage of delivery status per region.
 - Product sales trend.
 - Top 10 customer contribution to sales
2. **Configure Pivot Tables:**
 - Arrange fields in the Pivot Tables to display the desired information.
 - Use filters and slicers to allow dynamic data exploration.
3. **Visualize Data:**
 - Use charts and graphs to represent data visually.
 - Ensure charts are clear, informative and easy to understand.
 - Create a separate dashboard and put together all the charts and graph for proper representation.

4. Results

The Excel Supply Chain Dashboard provides the following key insights:

1. **Sales per Product:** Identifies the best-selling products allowing for inventory and marketing optimization.
2. **Percentage of Delivery Status:** Shows the distribution of delivery status and help to monitor and improve delivery performance.
3. **Product Sales Trend:** Displays sales trends over time and enabling the identification of sales patterns and seasonal trends.
4. **Top 10 Highest Customer Contributing to Sales:** Highlights the top 10 customers based on sales contribution, aiding in customer relationship management and marketing efforts.

5. Conclusion

The Excel Supply Chain Dashboard project successfully demonstrates the effective application of Power Query and Pivot Tables in analyzing and visualizing complex supply chain data. The interactive dashboard offers valuable insights into various aspects of the supply chain, including sales performance, delivery efficiency, and customer contributions. These insights enable stakeholders to make well-informed business decisions based on comprehensive data analysis. This project not only highlights proficiency in Excel but also stands as a significant asset to any business analyst or data analyst portfolio, showcasing the ability to transform raw data into actionable intelligence.

6. Appendices

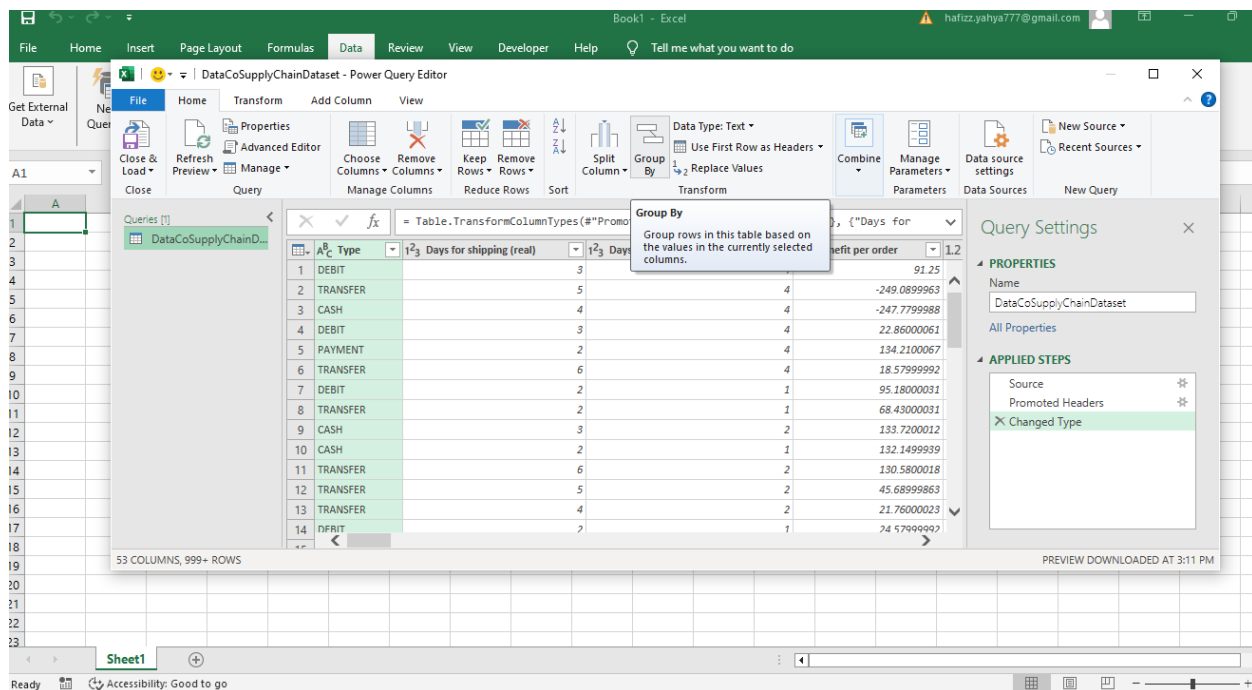

Appendix A: Power Query Transformations.

Step 1: Import Data into Power Query

1. Open Excel and navigate to the “Data” tab.
2. Select “New Query” > “From file” > “csv”
3. Choose the file name “DataCoSupplyChainDataset.csv”.
4. Click import > Transform.

Step 2: Data cleaning

1. Remove redundant column:
 - Inside power query editor, right-click the header of the desire column and choose remove.
 - Refer [here](#).

2. Converting Data Types:

- Right-click the header of the desire column.
- Click change type > currency.
- Change data type for any relevant data related with currency. For example, product price.

3. Data transformation

- Combine the fname and lname column.
- Click both fname and lname column.
- Go to Transform > Merge Columns > Separator > Custom > “Space Keyboard” > New Column Name > “Customer”.
- Rearrange all the column. Refer [Power Query Transformation](#).

The screenshot displays the Microsoft Power Query Editor interface. The top ribbon includes tabs for File, Home, Transform, Add Column, and View. The Transform tab is active, showing various transformation options like Merge Columns, Append Queries, and Combine Files. The main area shows a data table with columns: Order Item Id, Customer Id, Customer Name, Customer Email, Customer Password, and Customer Street. The data is transformed using the formula: `Table.TransformColumnTypes(#"Renamed Columns3",{{"Sales(with discount)", Currency.Type}, {"Sales(no discount)", ...}}`. The right sidebar shows the Query Settings for 'DataCoSupplyChainDataset', including the Name and the list of Applied Steps: Sorted Rows, Reordered Columns1, Renamed Columns, Reordered Columns2, Removed Columns, Removed Columns1, Reordered Columns3, Removed Columns2, Changed Type1, Removed Columns3, Reordered Columns4, Reordered Columns5, Merged Columns, Renamed Columns3, and Changed Type2. The bottom status bar indicates 44 COLUMNS, 999+ ROWS and PREVIEW DOWNLOADED AT 3:36.

Order Item Id	Customer Id	Customer Name	Customer Email	Customer Password	Customer Street
1	11599	Mary Malone	XXXXXXXXXX	XXXXXXXXXX	8708 Indian Horse Highway
2	256	David Rodriguez	XXXXXXXXXX	XXXXXXXXXX	7605 Tawny Horse Falls
3	256	David Rodriguez	XXXXXXXXXX	XXXXXXXXXX	7605 Tawny Horse Falls
4	256	David Rodriguez	XXXXXXXXXX	XXXXXXXXXX	7605 Tawny Horse Falls
5	8827	Brian Wilson	XXXXXXXXXX	XXXXXXXXXX	8396 High Corners
6	8827	Brian Wilson	XXXXXXXXXX	XXXXXXXXXX	8396 High Corners
7	8827	Brian Wilson	XXXXXXXXXX	XXXXXXXXXX	8396 High Corners
8	8827	Brian Wilson	XXXXXXXXXX	XXXXXXXXXX	8396 High Corners
9	11318	Mary Henry	XXXXXXXXXX	XXXXXXXXXX	3047 Silent Embers Maze
10	11318	Mary Henry	XXXXXXXXXX	XXXXXXXXXX	3047 Silent Embers Maze
11	11318	Mary Henry	XXXXXXXXXX	XXXXXXXXXX	3047 Silent Embers Maze
12	11318	Mary Henry	XXXXXXXXXX	XXXXXXXXXX	3047 Silent Embers Maze
13	11318	Mary Henry	XXXXXXXXXX	XXXXXXXXXX	3047 Silent Embers Maze
14	4530	Mary Smith	XXXXXXXXXX	XXXXXXXXXX	1073 Green Leaf Green
15	4530	Mary Smith	XXXXXXXXXX	XXXXXXXXXX	1073 Green Leaf Green
16	4530	Mary Smith	XXXXXXXXXX	XXXXXXXXXX	1073 Green Leaf Green
17	2911	Mary Smith	XXXXXXXXXX	XXXXXXXXXX	9166 Golden Nectar Corner
18	2911	Mary Smith	XXXXXXXXXX	XXXXXXXXXX	9166 Golden Nectar Corner
19	2911	Mary Smith	XXXXXXXXXX	XXXXXXXXXX	9166 Golden Nectar Corner
20	2911	Mary Smith	XXXXXXXXXX	XXXXXXXXXX	9166 Golden Nectar Corner
21	5657	Mary James	XXXXXXXXXX	XXXXXXXXXX	1389 Dusty Circuit
22	5657	Mary James	XXXXXXXXXX	XXXXXXXXXX	1389 Dusty Circuit
23	5657	Mary James	XXXXXXXXXX	XXXXXXXXXX	1389 Dusty Circuit

Step 3: Import Data into Excel

1. Go to top left of power query.
2. Click drop down button.
3. Choose close & load to.
4. Choose your desired Excel Sheet.

The screenshot displays the Microsoft Excel interface with the 'Data' tab selected. The ribbon includes options for 'Get External Data', 'New Query', 'Show Queries', 'From Table', 'Recent Sources', 'Get & Transform', 'Connections', 'Refresh All', 'Edit Links', 'Connections', 'Queries & Connections', 'Refresh All', 'Workbook Links', 'Sort & Filter', 'Filter', 'Advanced', 'Text to Columns', 'What-If Analysis', 'Forecast Sheet', 'Group', 'Ungroup', 'Subtotal', and 'Outline'.

The data table is as follows:

	A	B	C	D	E	F	G	H	I	J	K
1	Order Item Id	Customer Id	Customer Name	Customer Email	Customer Password	Customer Street	Customer City	Customer Zipcode	Customer State	Customer Country	Customer Type
2	1	11599	Mary Malone	XXXXXXXXXX	XXXXXXXXXX	8708 Indian Horse Highway	Hickory	28601 NC	EE. UU.		Cons
3	2	256	David Rodriguez	XXXXXXXXXX	XXXXXXXXXX	7605 Tawny Horse Falls	Chicago	60625 IL	EE. UU.		Cons
4	3	256	David Rodriguez	XXXXXXXXXX	XXXXXXXXXX	7605 Tawny Horse Falls	Chicago	60625 IL	EE. UU.		Cons
5	4	256	David Rodriguez	XXXXXXXXXX	XXXXXXXXXX	7605 Tawny Horse Falls	Chicago	60625 IL	EE. UU.		Cons
6	5	8827	Brian Wilson	XXXXXXXXXX	XXXXXXXXXX	8396 High Corners	San Antonio	78240 TX	EE. UU.		Hom
7	6	8827	Brian Wilson	XXXXXXXXXX	XXXXXXXXXX	8396 High Corners	San Antonio	78240 TX	EE. UU.		Hom
8	7	8827	Brian Wilson	XXXXXXXXXX	XXXXXXXXXX	8396 High Corners	San Antonio	78240 TX	EE. UU.		Hom
9	8	8827	Brian Wilson	XXXXXXXXXX	XXXXXXXXXX	8396 High Corners	San Antonio	78240 TX	EE. UU.		Hom
10	9	11318	Mary Henry	XXXXXXXXXX	XXXXXXXXXX	3047 Silent Embers Maze	Caguas	725 PR	Puerto Rico		Cons
11	10	11318	Mary Henry	XXXXXXXXXX	XXXXXXXXXX	3047 Silent Embers Maze	Caguas	725 PR	Puerto Rico		Cons
12	11	11318	Mary Henry	XXXXXXXXXX	XXXXXXXXXX	3047 Silent Embers Maze	Caguas	725 PR	Puerto Rico		Cons
13	12	11318	Mary Henry	XXXXXXXXXX	XXXXXXXXXX	3047 Silent Embers Maze	Caguas	725 PR	Puerto Rico		Cons
14	13	11318	Mary Henry	XXXXXXXXXX	XXXXXXXXXX	3047 Silent Embers Maze	Caguas	725 PR	Puerto Rico		Cons
15	14	4530	Mary Smith	XXXXXXXXXX	XXXXXXXXXX	1073 Green Leaf Green	Miami	33161 FL	EE. UU.		Cons
16	15	4530	Mary Smith	XXXXXXXXXX	XXXXXXXXXX	1073 Green Leaf Green	Miami	33161 FL	EE. UU.		Cons
17	16	4530	Mary Smith	XXXXXXXXXX	XXXXXXXXXX	1073 Green Leaf Green	Miami	33161 FL	EE. UU.		Cons
18	17	2911	Mary Smith	XXXXXXXXXX	XXXXXXXXXX	9166 Golden Nectar Corner	Caguas	725 PR	Puerto Rico		Corp
19	18	2911	Mary Smith	XXXXXXXXXX	XXXXXXXXXX	9166 Golden Nectar Corner	Caguas	725 PR	Puerto Rico		Corp
20	19	2911	Mary Smith	XXXXXXXXXX	XXXXXXXXXX	9166 Golden Nectar Corner	Caguas	725 PR	Puerto Rico		Corp
21	20	2911	Mary Smith	XXXXXXXXXX	XXXXXXXXXX	9166 Golden Nectar Corner	Caguas	725 PR	Puerto Rico		Corp
22	21	5657	Mary James	XXXXXXXXXX	XXXXXXXXXX	1389 Dusty Circuit	Lakewood	44107 OH	EE. UU.		Cons
23	22	5657	Mary James	XXXXXXXXXX	XXXXXXXXXX	1389 Dusty Circuit	Lakewood	44107 OH	EE. UU.		Cons

The bottom of the screen shows the 'Sheet1' tab selected, and the status bar indicates 'Ready' and 'Accessibility: Investigate'.

Appendix B: Pivot Table Configuration

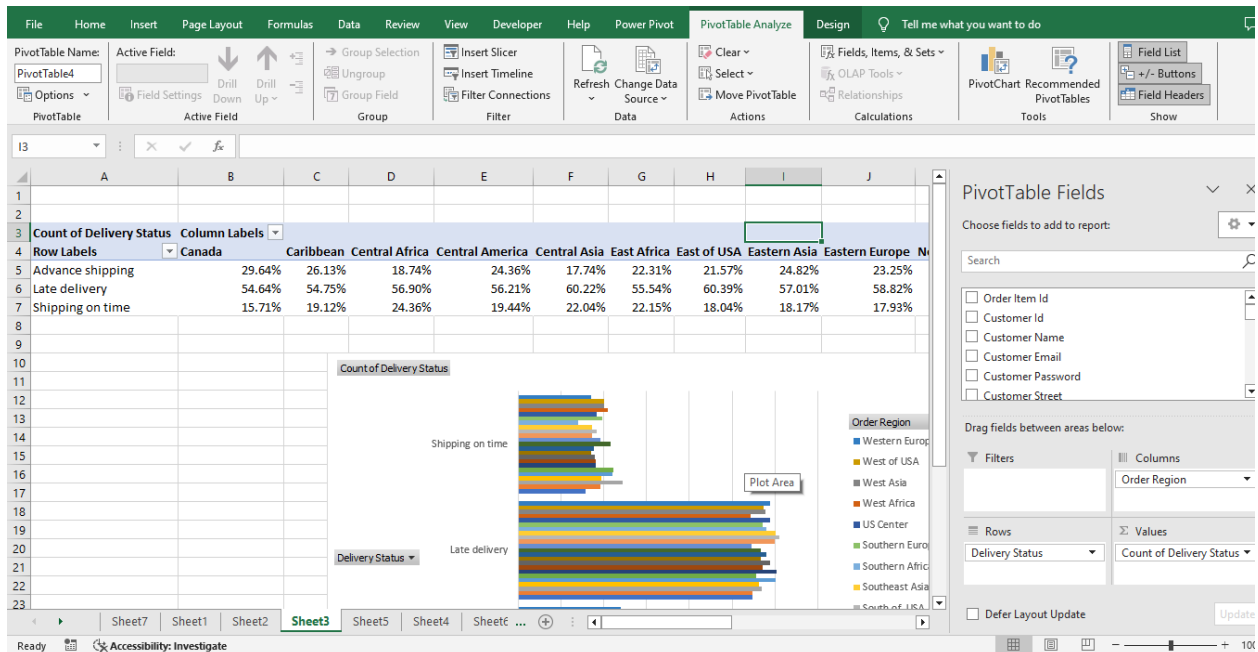

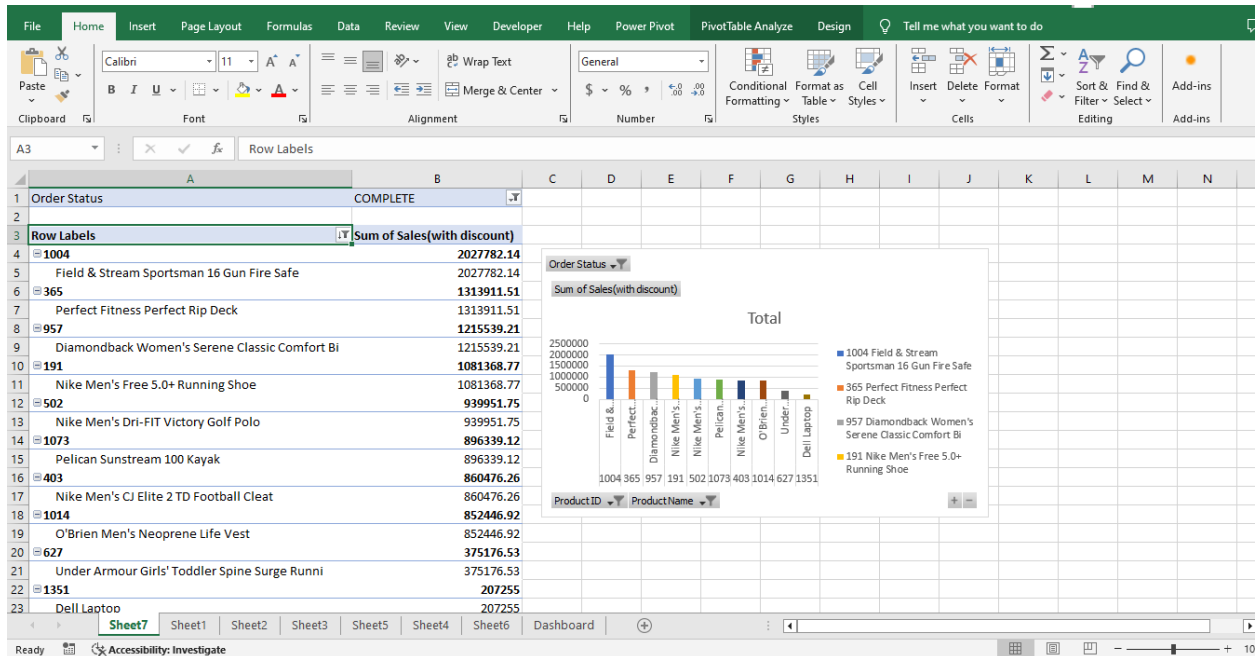

1. Insert > Pivot Table > From Table/Range > New Worksheet
2. Drag Product ID and Product Name into row section.
3. Drag Sales (with discount) into Values section.
4. Click on any calculated sales.
5. Data > Sort > Largest to smallest.
6. Click on any product id.
7. Right-click > Filter > Top 10 > Click Okay.
8. Repeat the step.
9. Refer [here](#) or you can try you own analysis.

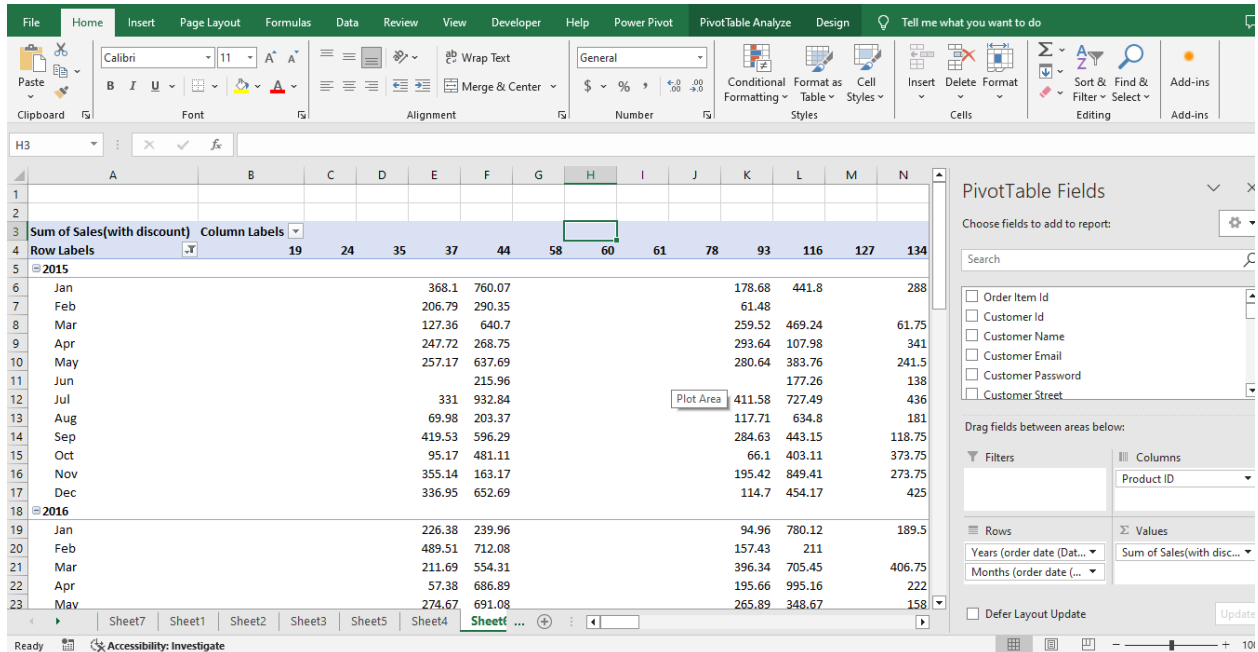

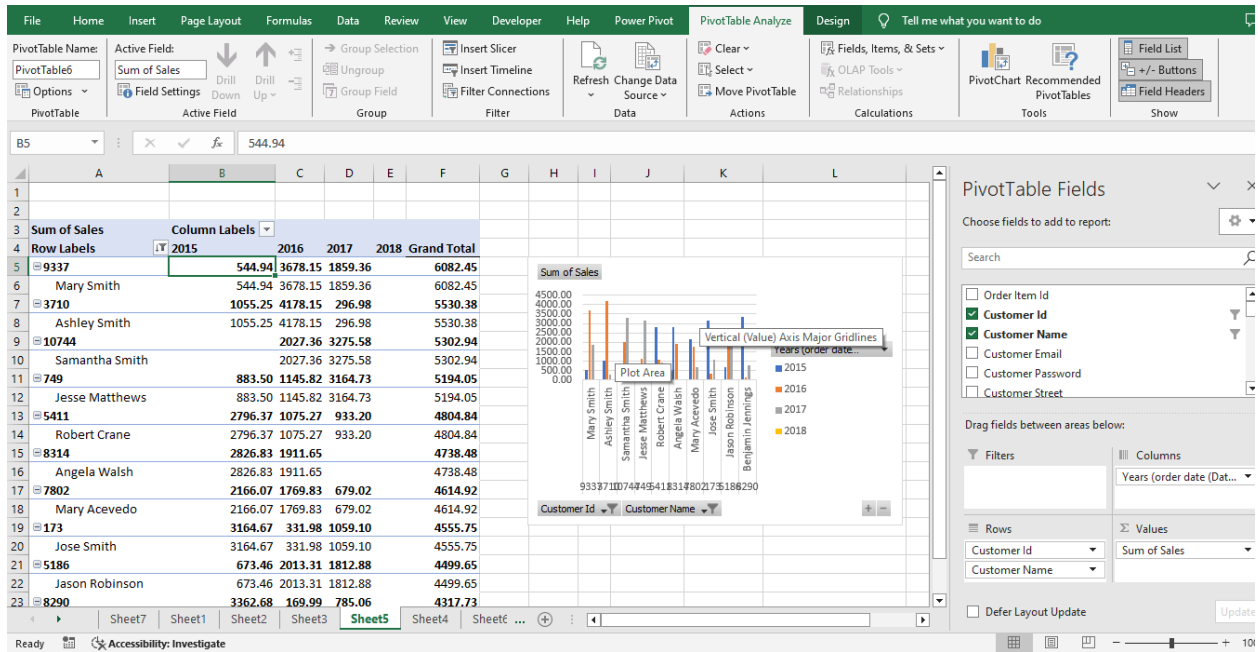

The screenshot shows the Microsoft Excel interface with the PivotTable Fields task pane on the right. The task pane is configured with 'Product ID' and 'Product Name' in the Rows section and 'Sum of Sales(with discount)' in the Values section. The main worksheet displays a list of products and their sales values.

Row Labels	Sum of Sales(with discount)
1004	6226935.12
Field & Stream Sportsman 16 Gun Fire Safe	6226935.12
365	3973180.31
Perfect Fitness Perfect Rip Deck	3973180.31
957	3700783.54
Diamondback Women's Serene Classic Comfort BI	3700783.54
191	3295693.52
Nike Men's Free 5.0+ Running Shoe	3295693.52
502	2828708.5
Nike Men's Dri-FIT Victory Golf Polo	2828708.5
1073	2785518
Pelican Sunstream 100 Kayak	2785518
403	2598494.44
Nike Men's CJ Elite 2 TD Football Cleat	2598494.44
1014	2596454.04
O'Brien Men's Neoprene Life Vest	2596454.04
627	1140770.95
Under Armour Girls' Toddler Spine Surge Runni	1140770.95
1351	595395
Dell Laptop	595395

Appendix C: Charts and Graphs

1. Click on Pivot Table Analysis.
2. Pivot Chart > Clustered Chart.
3. Right click on chart title > Delete.
4. Right-click on the Series.
5. Format Data Series > Fill & Line > Fill > Vary Color by Point > Close.

Appendix D: Dashboard Images
